User interface AutoCAD Classic has a command line interface (CLI) that allows drawing or editing in batch mode using batch files, which can be run by anyone with a computer running AutoCAD. For example, a user could run a batch file to import all drawings of a specific type into the drawing or to create a number of drawings from scratch. AutoCAD has an optional integrated development environment (IDE) that supports editing files and creating new files. There is also a Windows Forms-based DesignCenter allowing users to view and edit drawings. In addition, AutoCAD offers both a ribbon and menu-based interface, which enables the user to easily navigate through drawing features. There are also GUIs available for AutoCAD LT and LTSP. Newer versions of AutoCAD (2011+) have a new user interface that allows for a point-and-click method of creating drawings. With the latest release of AutoCAD 2013, the Ribbon has been redesigned to be consistent with other Microsoft Windows applications and better facilitate the creation of drawings. A client-side Javascript API is also available. The Paper Space environment AutoCAD 2004, 2005, and 2008 contain an application called the Paper Space environment, which allows

users to present and edit drawings within a virtual space, consisting of two dimensions, the z-axis and the x-y plane. Users place drawings using the "Click and Drag" interface. Drawings are linked to the tools and features that will manipulate them. These are called parameters, and when the user performs a tool, the parameters are updated and reflect the tool's current settings. For example, the mouse coordinates (mX,mY) of a drawing's mouse would be set to 1,1. The position of a drawing in a paper space coordinate system is measured in points. A point is equal to 1/72 of an inch. This would be measured at 1 point = 1 inch. The drawing area is considered a 4 × 4, or 1024 × 1024, point size. A change to the parameters of the paper space has many side effects in the drawing and on linked tools. For example, if the user changes the scale of the paper space, then the sizes of the drawing and the tool will change proportionally. The paper space may also show a "cursor" line, a line that shows the user's current position. The cursor will not move in the paper space while holding the mouse 5b5f913d15
